## Alarm-immobiliser

Alarm information  
through GSM

### Main advantages of SeCaS GPRS system

- owner informed immediately of any unauthorised contact
- jamming detection and GSM functionality monitoring
- low costs
- car position detection
- remote commands can be sent from mobile phone
  - blocking and unblocking
  - blocking electronic key control functions in the event of theft
  - remote STOP function
- protection against unauthorised electronic keys
- constant function checking

### Enables you:

- connect a laptop to the Internet using GPRS
- connect an additional alarm sensor input
- employ the general output which is active while engine is running
- activate the general output (for the specified time)
- perform complete configuration settings using a PC
- extend the functions using easy system SW upgrading

### Alerts you:

(via telephone call and/or mobile phone text message) in the event of:

- an alarm—alerts up to two pre-defined alarm numbers
- an emergency (PANIC button, Crash sensor)—alerts pre-defined number
- authorised contact (if configured)—alerts pre-defined number
- alarms and emergencies—alerts central office (if number has been defined)

### Safeguards:

- opening of doors or bonnet
- internal room (ultrasonic sensor)
- attempt at ignition
- drop in voltage or disconnection of car battery
- activation of incline sensor
- pressing of PANIC button
- activation of crash sensor
